EDUCATION

2022 - 2027

MEMORIAL UNIVERSITY OF NEWFOUNLAND

- Mechatronics Engineering
- GPA: 3.69/4.0

SKILLS

- P&ID Interpretation
- Solidworks
- Onshape
- AutoCAD
- Fusion
- Mechanical Design
- 3D Printing
- Rapid Prototyping
- Circuit Design
- Circuit Analysis
- SPICE Simulation
- PCB Design
- Soldering
- Python
- Arduino
- Scripting
- Public Speaking
- Leadership
- Problem Solving
- Critical Thinking
- Microsoft Suite
- Technical Writing

WORK EXPERIENCE

Solace Power

Electrical Engineering Student - Returning 09/2026 - PRESENT

- Conducting PCB inspections, efficiency testing, and functional validation of newly developed circuit boards.
- Testing and troubleshooting PCBs using multimeters, power supplies, and electronic loads to verify performance and identify faults.
- Designing and modifying schematics and PCB layouts in Altium Designer, incorporating design changes based on testing results.
- Performing component soldering and PCB rework to assemble prototypes, replace components, and support design iterations.

Electrical Engineering Student 01/2026 - 05/2026

- Designed, built, and tested an electronic load box, including component selection, schematic capture, PCB layout, soldering, and validation using standard lab equipment.
- Applied analog and digital circuit design principles using tools such as Altium Designer and SPICE to troubleshoot PCB- and system-level issues and achieve accurate, repeatable results.
- Collaborated with cross-functional teams on multiple engineering projects, managing deadlines, documenting results clearly, and supporting testing and assembly through PCB soldering and lab-based verification.

Enaimco

Student Assistant - Technical Data Support 05/2025 - 08/2025

- Engineered AutoLISP scripts to automate AutoCAD data extraction, cutting manual effort and boosting workflow efficiency by 8x
- Developed Blender add-ons to automate recurring tasks and enable direct MongoDB uploads, streamlining 3D asset management
- Delivered client-focused web application updates by building interactive maps, implementing P&IDs and integrating engineering drawings, documents, and data related to subsea oil & gas structures

The Fluvarium

Technical Design Lead 10/2024 - 12/2024

- Lead remote-control boat research and design, guiding technical development and team coordination
- Performed analysis and prototyping for remote-control model
- Researched, selected, and assembled electronic components for a remote-controlled boat
- Consulted professors to design and apply appropriate constraints
- Managed budget and procurement for RC boat prototyping, optimizing resources

Faculty of Engineering, Memorial University

Student Design Hub Engineering Assistant 01/2024 - 05/2024

- Managed and maintained 3D printers, laser cutters, and other equipment, ensuring functionality through regular testing
- Diagnosed and repaired machinery to minimize downtime and improve efficiency
- Created user guides and maintenance protocols, extending equipment lifespan
- Monitored equipment usage, enforced safety protocols, and ensured compliance
- Collaborated with teams to identify resource needs and secure tools
